

# SONARQUBE ARCHITECTURE

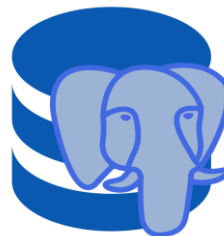

SonarQube Scanner scan your code do the code quality analysis, prepare the Matrix and then it's going to push all the Matrix to the SonaQube Server

SonarQube Scanner analyze the code based on the rules defined in SonarQube server

SonarQube Server

PostgreSQL

PostgreSQL store the configuration of the SonarQube instance (security,plugins,settings, etc.)

Rules

SonarQube comes with the predefined rules for many programming languages

we can add or remove or disable rules

These are the rules against which your code will be analyzed
